

# Wall Capping

Comes with liner flashings, structured underlay, double vulcanized joints with cover strip.

Can be supplied with preformed internal/external corner sections, capping lengths with or without end caps.

The front face is typically a minimum of 75mm. The total girth possible depends on the available metals in stock. Coil widths are often 600mm which defines the total available girth for the capping. Larger coils for larger capping may be available.

Capping lengths are 2000mm, other lengths may be possible.
